

Can my daughter make mud pies in peace?

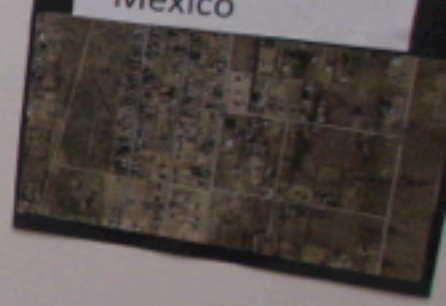

Far East El Paso, Texas

Can contaminated soil harm your health?

Chaparral, New Mexico

How are we going to do it?

Background information:

We are going to take soil samples of the "contaminated" places we have picked such as Chaparral, Far Eastside El Paso TX, and Asarco. After taking the soil samples, we will bring it back to the lab and test the soil for the chemical it has to see if it actually is contaminated and if we should take caution of this places.

There has been a lot of thought if how that waste has caused many of the effects to get out of the land the factory produces. Even though the factory was shut down and the people thought they believe that the harmful chemicals are removed and still in our atmosphere have spread that you can still be harmed by the chemicals that still remain in the air. So we plan on going to the area where Asarco was, how where we will get the soil. We're to have been in the ground and examining the soil to see if we can find any harmful chemicals that can harm the human body. We just want to go to Asarco there is another test and also that shows to have a map that shows the soil area for this project. People who live near it should be careful if you get that they believe they might come due to the fact that the city produces. There has also been a few weeks that the people believe that the soil is clean. It has been a long time that the soil is clean. The people that don't, are not on going to have a map of the soil to see if we can find any harmful chemicals in the soil to see if we can find any.
